

Junior Software Engineer

We are looking for a junior software engineer (part-time or full-time) to join our growing team.

Z22 Technologies is a quantitative asset manager, founded in 2019 and focusing on proprietary volatility strategies. We are a spin-off of both ETH Zurich and University of St. Gallen. In a short amount of time, we could grow our assets under management from 250k to over 200 million USD and with this growth, the requirements for our technical infrastructure are increasing substantially.

You will be working on complex data storage, streaming and retrieval systems, our in-house developed backtesting and live-trading framework and learning a lot from our lead engineer on how to optimize computer code to the maximum.

Our lingua franca is Python with some C modules sprinkled in here and there. Knowledge of these languages and a strong technical background are a requirement for this job.

If you think you have what it takes and want to learn how to tackle difficult engineering tasks, drop us a line.

Looking forward to hearing from you!

Stay Humble, Stay Hungry

Z22 Technologies
