

## Quantitative Researcher - Summer Internship

Are you a curious and scientific mind and interested in unveiling hidden relationships within the financial markets? Have you always wanted to quantitatively invest your money but lacked the tools to do so?

We have the unique opportunity for you to join Z22 Technologies for this summer and develop your own trading strategy using our cutting edge software and infrastructure. Whether you are interested in the stock market, complex derivatives, commodities or crypto, you decide on what you want to work on. Your goal will be to build a feasible investment strategy with our help over the course of the summer. If you fit into the team and deliver outstanding results, we are also happy to offer you part-time employment during your further studies and full-time employment after that.

Z22 Technologies is a quantitative asset manager founded in 2019 with a focus on volatility trading. We are a spin-off of both ETH Zürich and University of St. Gallen and are currently managing more than 200 million USD.

If you are interested in this opportunity, drop us a line and let us know a bit about your background, what you intend to work on during the internship and why we should hire you! :)

Looking forward to hearing from you!

Stay Humble, Stay Hungry
